

# Proposal for Emoji: Kidney

**Submitter:** Shuhan He; Edgar Lerma; Caitlyn Vlasschaert; Jade M. Teakell; Harish Seethapathy; Jarone Lee; Danielle Miller; Timur Erk; David Rhew, MD (Microsoft); Heena Purohit (Microsoft for Startups)

**Main point of contact:** Shuhan He

**Date:** 2026-07-26

## Identification

**Suggested name:** Kidney

**Suggested keywords:** renal; anatomy; organ; filtration; urine; dialysis; transplant; donation; stone; kidney test

**Suggested category:** People & Body - body-parts

**Suggested sort location:** Near anatomical heart, lungs, and brain in the body-parts subgroup.

## Required Example Images

| Size  | Color                                                                               | Black and white                                                                      |
|-------|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 18x18 |  |   |
| 72x72 |  |  |

I release the images under the CC0 1.0 Universal Public Domain Dedication and grant the rights required by the Unicode Emoji Proposal Agreement and License.

[CC0 1.0 Universal Public Domain Dedication](#)

## Factors for Inclusion

### A. Multiple meanings

Not applicable. Kidney is proposed only in its literal sense.

## B. Use in sequences

Two short combinations express established phrases:

- Kidney + rock: kidney stone.
- Kidney + test tube: kidney tests or kidney function tests.

MedlinePlus uses kidney stone analysis for a patient collecting a passed stone for a provider or laboratory, and lists kidney tests, kidney function tests, and kidney panel as established names for blood, urine, and imaging checks. See [Kidney Stone Analysis](#) and [Kidney Tests](#).

## C. Breaks new ground

**Yes.** The [current Unicode Emoji List](#) has no Kidney character. Beans is the closest encoded pictograph, and Unicode even includes kidney among its search keywords; however, its CLDR name is beans and it remains a Food & Drink pictograph. Generic medical emoji add care or testing but do not supply the missing literal organ. See the [Unicode Emoji List](#).

## D. Distinctiveness

Kidney is shown as two maroon, inward-facing forms with visible medial notches, a slight vertical offset, and a short central attachment. The polished 72-pixel example adds restrained shading, while the purpose-built 18-pixel example keeps only the notches, offset, and short attachment. Those cues distinguish it from separate Beans and from the symmetric lobes and top-entering airway of Lungs. Vendors may vary color, shading, and fine anatomical detail while preserving the paired notched forms and offset.

## E. Expected usage level

Kidney supplies the missing noun in ordinary messages about a stone, test results, dialysis, a transplant, or living donation. U.S. patient guidance uses the exact phrases kidney stone, kidney tests, kidney transplant, and donate a kidney; U.K. guidance likewise uses kidney transplant tests and explains dialysis when kidneys can no longer filter normally. These are concrete situations in which people collect a stone, discuss results, prepare for treatment, or donate or receive an organ; this is not an argument from medical importance. See [Kidney Stone Analysis](#), [Kidney Tests](#), [Kidney Transplant](#), [Living Donation](#), [Kidney Transplant Tests](#), and [Dialysis](#).

The five required frequency exhibits below test the unfiltered term kidney; Google Trends and Google Books compare it with elephant. They establish sustained term visibility, not medical importance or guaranteed emoji use.

### Human Kidney Anatomy

External View Internal View

Labels: renal cortex, renal medulla, renal pelvis, renal pyramids, renal papilla, renal sinus, renal hilum, renal artery, renal vein, ureter, bladder, urethra.

Kidneys are **two bean-shaped organs, about the size of a fist, located on either side of the spine just below the rib cage**. They filter roughly 37 gallons of blood daily to remove waste and extra water, maintaining fluid, salt, and mineral balance while producing urine. Key functions also include regulating blood pressure, stimulating red blood cell production, and managing bone health. [Cleveland Clinic](#) 4

#### Key Kidney Functions & Health

- Filtration:** Using millions of tiny units called nephrons, kidneys filter waste and excess water from the blood, which then travels to the bladder through ureters.

## Google Video Search

Captured 2026-05-13 in signed-out Google Video Search with English-language results and no date or country filter selected. The page reports about 66,000,000 indexed results. [Open the reproducible Google Video Search query.](#)

The screenshot shows the Google Video Search interface. The search bar contains the word "kidney". Below the search bar, there are tabs for "All Mode", "All", "Images", "News", "Videos" (which is selected), "Shopping", "Books", "More", and "Tools". The search results are displayed as a list of video thumbnails with titles and descriptions. The first result is "How Do Kidneys Work?" from Cleveland Clinic, dated Jun 19, 2024. The second result is "Get to Know Your Kidneys" from the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), dated Feb 26, 2024. The third result is "Kidney Function" from Nucleus Medical Media, dated Apr 29, 2025. The fourth result is "How Your Kidneys Work" from Nucleus Medical Media, dated May 16, 2024. The fifth result is "How kidneys work" from Mayo Clinic, dated Mar 25, 2021. The sixth result is "Mayo Clinic Explains Kidney Disease" from Mayo Clinic, dated Dec 16, 2021. A dropdown menu is open on the right side of the search bar, showing filters for "Any duration", "Any time", "Any quality", "All videos", "Any source", and "Advanced Search". At the bottom of the dropdown menu, it says "About 66,000,000 results (0.18s)".

## Google Books Ngram Viewer

Captured 2026-07-09 using the English corpus, 1500-2022, and smoothing 3. Kidney exceeds elephant in recent published-book usage. [Open the reproducible Google Books Ngram query.](#)

## F. Completeness

Not applicable. Internal organs are not a fixed set.

## G. Compatibility

Not applicable. This proposal does not rely on a legacy carrier emoji or another encoded pictograph.

## Factors for Exclusion

### A. Already representable

Beans is the strongest existing single emoji. Unicode's own `kidney` keyword makes it searchable, and with shared context it can stand in for a kidney. Its visible and named meaning is still food. Beans + Hospital can suggest kidney care, but can equally read as food, diet, or beans at a hospital. Beans + Rock does not clearly name `kidney stone`, and Beans + Test Tube does not clearly name `kidney tests`; the reader must first assume that Beans means an organ. A Kidney character supplies that missing noun. See the [Unicode Emoji List](#).

### B. Overly specific

Kidney represents the organ generally. The same noun is used in kidney stone analysis, kidney testing, dialysis, transplantation, and living donation; it is not a specific disease, procedure, campaign, organization, or subtype.

### **C. Open-ended**

The closest unencoded neighbors are Liver, Stomach, Pancreas, and Spleen. Kidney has a specific combination that those names cannot simply reuse: kidney stone and dialysis, together with kidney testing and donation/transplant language. Beans and short sequences still fail to identify the organ, the required frequency exhibits show sustained use of its name, and the paired notched form remains legible at small size. Kidney is not proposed because organs are important or because an anatomy set should be completed; encoding it would not establish that every neighboring organ meets the same evidence.

### **D. Transient**

Kidney is an established anatomical term rather than a campaign, event, or product. The embedded Google Books evidence spans 1500-2022, while current NIDDK, MedlinePlus, and HRSA guidance uses the same noun across testing, stones, dialysis, transplantation, and donation.

### **E. Faulty comparison**

Existing organ emoji do not create an entitlement to Kidney. Lungs is used only as a small-size legibility comparison; the Kidney case rests on the named stone, testing, dialysis, transplant, and donation messages, the remaining ambiguity of Beans, the frequency evidence, and the paired notched pictograph.

## **Other Information**

The singular name Kidney identifies the organ concept even though the example shows the familiar paired organs; this proposal does not request separate singular and plural characters. Vendors may vary color, shading, and fine anatomy while preserving two inward-facing notched forms, a visible offset, and a short central attachment. Full vascular anatomy is intentionally omitted for legibility at 18x18.
