

Proposal for Emoji: Liver

Authors: Shuhan He, MD; David Rhew, MD; Heena Purohit; Adi Balk

Affiliations: David Rhew, MD - Global Chief Medical Officer & VP Healthcare, Microsoft; Heena Purohit - Director of AI Startups, Microsoft for Startups

Submitter: Shuhan He, MD

Main point of contact: Shuhan He

Date: 2026-07-26

Identification

Suggested name: Liver

Suggested keywords: anatomy; biology; organ; food; cooking; laboratory test; transplant; donation

Suggested category: People & Body - body-parts

Suggested sort location: Near Anatomical Heart, Lungs, and Brain in the body-parts subgroup.

Required Example Images

Size	Color	Black and white
18x18		
72x72		

The proposed image shows a full, asymmetrical liver with a larger rounded side, a smaller tapered side, a visible diagonal dividing line, and an optional small gallbladder beneath the lower edge. Vendors may change the angle, shading, and color, or omit the gallbladder, while preserving the broad unequal outline at emoji size.

I, Shuhan He, certify that these example images are original work created for this proposal, that I own all IP Rights in them, and that they contain no third-party artwork, logo, trademark, or text. I release the images under the CC0 1.0 Universal Public Domain Dedication and grant the rights required by the Unicode Emoji Proposal Agreement and License.

Factors for Inclusion

A. Multiple meanings

Not applicable. Anatomy, food, and healthcare are literal uses of the liver, not separate metaphorical meanings.

B. Use in sequences

Liver can combine with existing emoji to make three concise messages:

- Liver + Test Tube: “My liver-test results.”
- Liver + Pill + Warning: “This medicine may affect my liver.”
- Liver + Fork and Knife: “Liver is on the menu.”

MedlinePlus uses the term “liver function tests” and explains that these tests can check for side effects of medicines that affect the liver.

FAO/Codex classifies liver as edible offal fit for human consumption, supporting the food message as a separate everyday use of the same organ image.

Sources:

- [MedlinePlus: Liver Function Tests](#)
- [FAO/Codex: Classification of Food and Food Groups](#)

C. Breaks new ground

Yes. Test Tube can say “test,” Pill + Warning can say “medicine risk,” and Fork and Knife can say “meal,” but none can say liver. Cut of Meat can suggest meat in general, but not the recognizable whole organ. Liver supplies the missing subject in anatomy, food, and the cited health messages.

Reference: [Current Unicode emoji list](#)

D. Distinctiveness

The image is broad and low, with a larger rounded side, a smaller tapered side, and a diagonal dividing line. At 18x18, those cues separate it from the tall Anatomical Heart, paired Lungs, round Brain, marbled Cut of Meat, and multiple Beans. The green gallbladder helps in color but is optional; the outline and unequal sides carry the identity in both color and black and white.

Liver	Anatomical Heart	Lungs	Brain	Cut of Meat	Beans	
Color 72						
Color 18						
B/W 72						
B/W 18						

E. Expected usage level

Liver is a common standalone term for a recognizable organ in anatomy and biology, an ingredient in food and cooking, and the subject of health messages about testing, medicine effects, transplantation, and donation. MedlinePlus documents its anatomy and test uses, FAO/Codex classifies liver as edible offal, and NIDDK documents liver transplantation and living donors. The five required figures below measure the standalone term across these uses: they show worldwide Web interest comparable to `elephant` , lower but sustained worldwide Image Search interest, and substantially higher recent English-language published-word frequency.

Google Search

Captured 2026-07-26. With Tools open, Google reports about 183,000 results for the unquoted term `liver`.

Open the reproducible Google Search query

The screenshot shows a Google search interface for the term "liver". The search bar at the top contains the word "liver". To the right of the search bar are icons for settings, sharing, and a "Sign in" button. Below the search bar, the "Tools" menu is open, showing options: "Any time", "All results", "Advanced Search", and "About 183,000 results (0.19s)".

On the left side of the results, there is an "AI Overview" section. It states: "The liver is the largest internal organ in the human body, located in the upper right side of the abdomen. It performs over 500 vital jobs, including filtering blood, making bile to digest food, and storing energy." Below this text is a "Key Functions" section with a "Show more" button.

On the right side, there is a "Wikipedia" snippet titled "Liver - Wikipedia". It includes a small anatomical diagram of the human torso with the liver highlighted. The text says: "The liver is a major metabolic organ exclusively found in vertebrates, which..."

Below the AI Overview, there is a result from "Cleveland Clinic" with the title "Liver: Where It's Located, Function & Anatomy". The snippet reads: "Sep 26, 2025 — Your liver is located on the right side of your upper abdomen. Its functions include filtering blood, making chemicals and fighting ..."

Further down, there is a "People also ask" section with four questions, each with a dropdown arrow:

- What are the first signs of a bad liver?
- What is the best drink to flush your liver?
- How do I fix liver problems?
- Where do you feel liver pain?

At the bottom, there is another "Wikipedia" result titled "Liver". The snippet reads: "The liver is a major metabolic organ exclusively found in vertebrates, which performs many essential biological functions such as detoxification of the organism"

Below the Wikipedia result, there is an "Images" section.

Google Books Ngram Viewer

Captured 2026-07-09 using the English corpus, 1500-2022, and smoothing 3. Liver substantially exceeds elephant in recent published-word frequency.

[Open the reproducible Google Books Ngram comparison](#)

F. Completeness

Not applicable. Anatomy is not a fixed set for this factor.

G. Compatibility

Not applicable. No qualifying popular-system pictograph is claimed.

Factors for Exclusion

A. Already represented

Test Tube can say “test,” Pill + Warning can say “medicine risk,” and Fork and Knife can say “meal.” Cut of Meat can suggest meat in general. None identifies liver directly, so each loses the subject of the cited message.

B. Overly specific

The proposal is for the whole liver, not a lobe, disease, test result, transplant procedure, specialty, recipe, or campaign. It names a broad organ used in anatomy and biology, food and cooking, and healthcare.

C. Open-ended

Liver crosses three documented domains: a recognizable organ in anatomy, edible offal in food, and the subject of testing, medicine, and transplantation messages. The same whole-organ image names the subject in each domain. The proposal does not encode every related body part, food, test, disease, medicine effect, or procedure, and it does not depend on completing an anatomy set.

D. Transient

Liver is not tied to a campaign, event, or temporary technology. The English-language Ngram tracks the word through 1500-2022; MedlinePlus uses it for anatomy and tests, FAO/Codex for food, and NIDDK for transplantation.

E. Faulty comparison

Anatomical Heart, Lungs, and Brain are shown only as visual and sorting references. Liver is proposed for the sourced messages and frequency evidence above, not because those emoji already exist.

Other Information

Essential design cues are a broad asymmetrical outline, a larger rounded side, a smaller tapered side, and a diagonal dividing line visible at 18x18. The gallbladder, shading, angle, and exact color are optional. Vendors should avoid a rectangular food cut or a featureless filled oval.
