

Proposal for Emoji: Stomach

Submitters: Shuhan He, MD; David Rhew, MD; Heena Purohit

Main point of contact: Shuhan He

Date: 2026-07-26

Identification

Suggested name: Stomach

Suggested keywords: digestion; gut; belly; abdomen; hunger; appetite; fullness; nausea; indigestion; reflux

Suggested category: People & Body - body-parts

Suggested sort location: Near anatomical heart, lungs, and brain in the body-parts subgroup.

Required Example Images

Size	Color	Black and white
18x18		
72x72

Factors for Inclusion

A. Multiple meanings

Stomach has several familiar meanings. It names the digestive organ and is commonly used to talk about hunger, fullness, nausea, and discomfort. It also appears in established expressions such as [butterflies in your stomach](#), [a strong stomach](#), and [being unable to stomach something](#).

B. Use in sequences

Stomach adds a specific organ meaning to several short combinations:

- Stomach + fork and knife: digestion or fullness after a meal.
- Stomach + nauseated face: an upset stomach or nausea.
- Stomach + butterfly: butterflies in the stomach or nervous anticipation.

C. Breaks new ground

Yes. Nauseated Face expresses a symptom, and food emoji show what is eaten, but neither identifies the stomach itself. Stomach adds a clear way to talk about the organ, digestion, hunger, fullness, discomfort, and familiar expressions such as butterflies in your stomach.

D. Distinctiveness

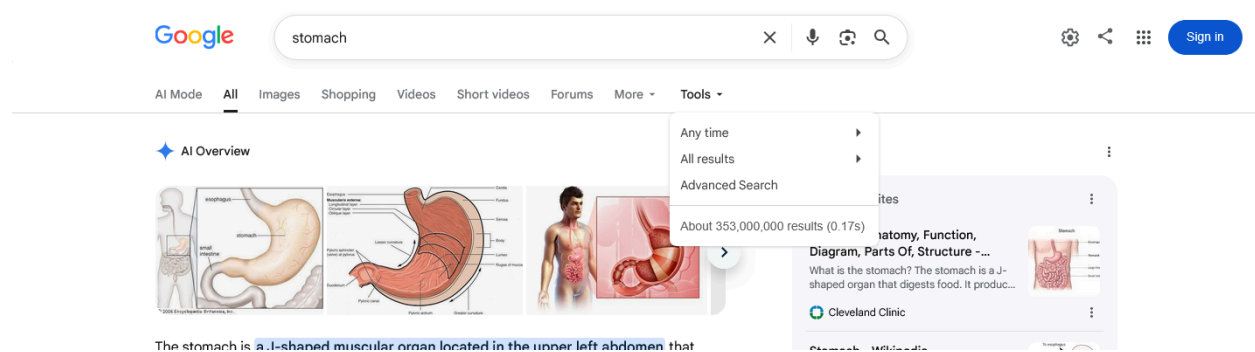

Stomach is shown with a clear J shape, a long upper inlet, an open inner curve, a broad lower body, and a short outlet. At 18x18, the J shape and two openings distinguish it from Beans, Anatomical Heart, Meat on Bone, and other organs. Vendors may vary color, angle, outline, and shading while keeping these features.

E. Expected usage level

Stomach is an ordinary term used in communication about digestion, eating, hunger, appetite, fullness, nausea, stomach aches, indigestion, reflux, medication, education, and figurative emotion. The five required frequency sources show broad and durable use across web search, video, image search, and published books. Google Trends and Google Books compare `stomach` with Unicode's reference term `elephant`.

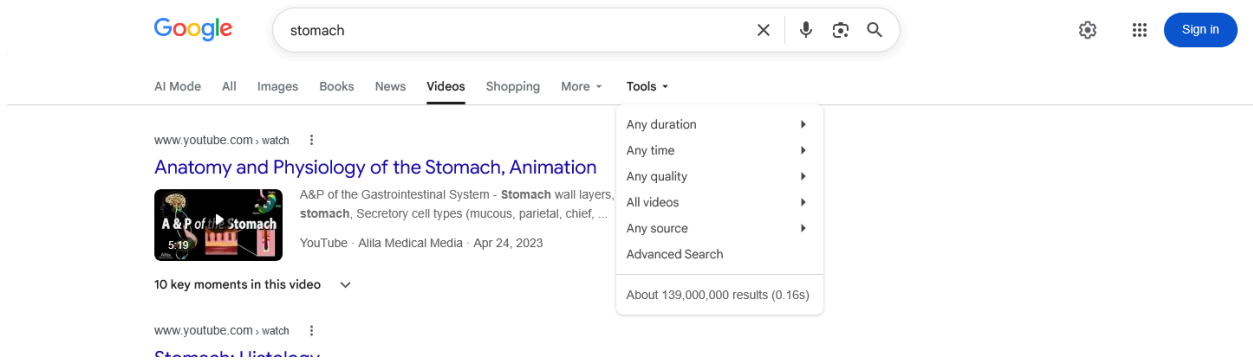

Google Search

Captured 2026-07-26. Google Search displays about 353,000,000 results for `stomach`. [Open the Google Search query.](#)

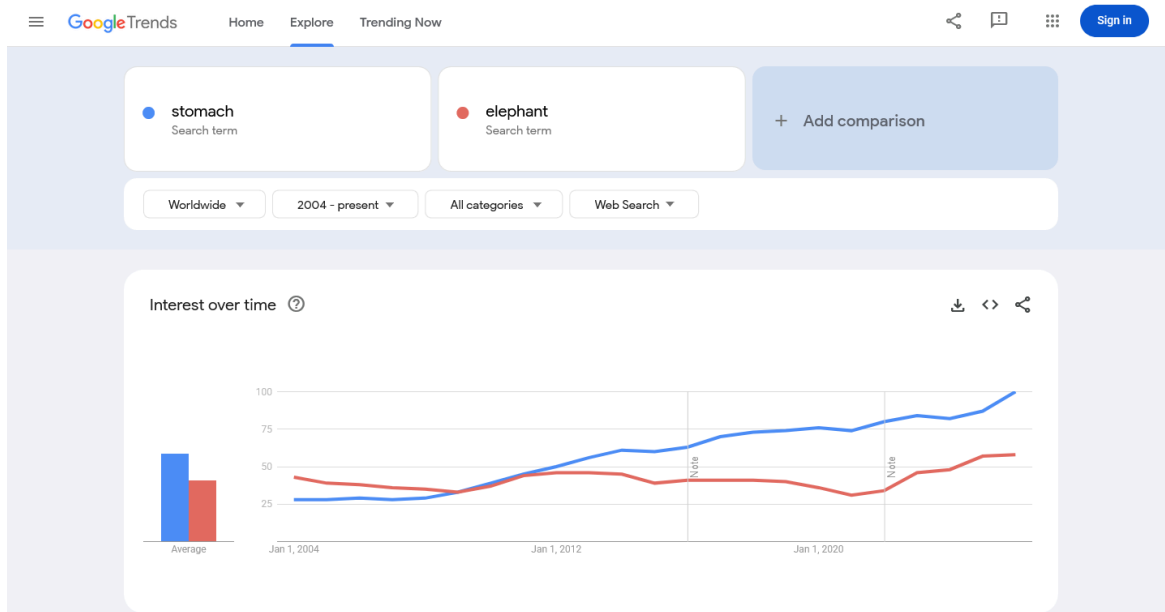

Google Video Search

Captured 2026-07-26. Google Video Search displays about 139,000,000 results for stomach. [Open the Google Video Search query.](#)

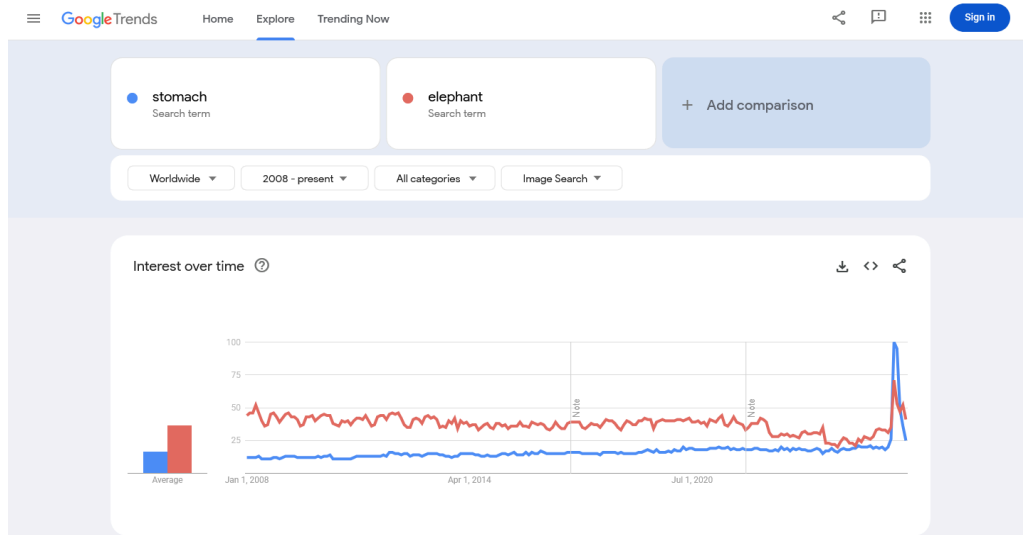

Google Trends - Web Search

Captured 2026-07-26 using Worldwide, 2004-present, All categories, and Web Search. Stomach has the higher displayed average across the full range and a strong sustained lead in recent years. [Open the Web Search comparison.](#)

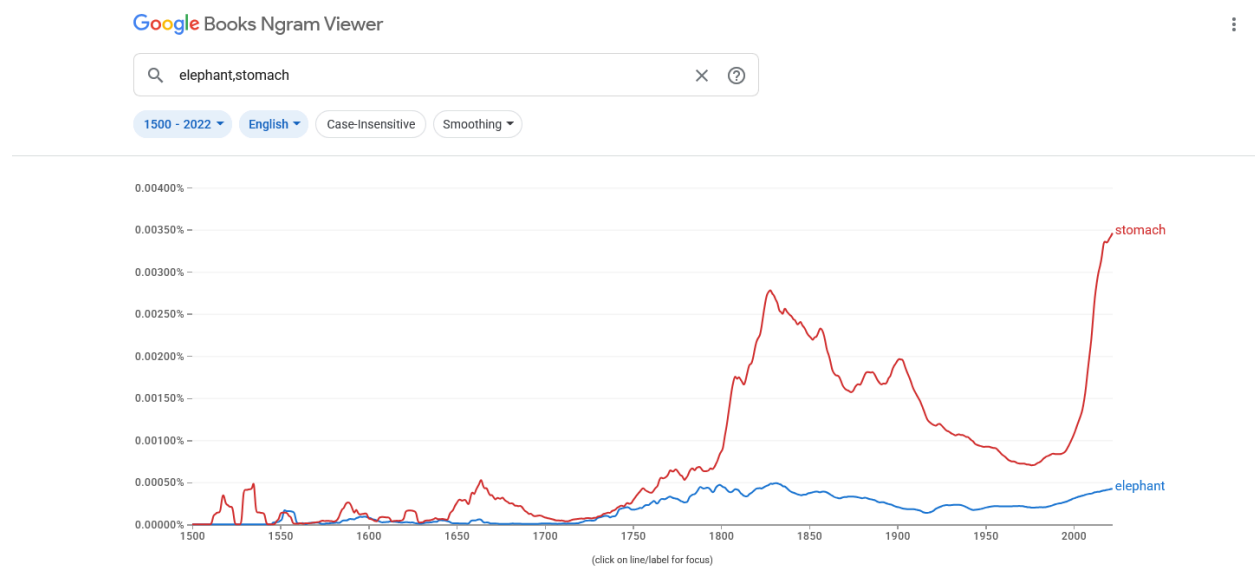

Google Trends - Image Search

Captured 2026-07-26 using Worldwide, 2008-present, All categories, and Image Search. Stomach shows sustained worldwide image-search interest across the full available range and a strong recent peak above elephant. [Open the Image Search comparison.](#)

Google Books Ngram Viewer

Captured 2026-07-26 using the English corpus, 1500-2022, case-insensitive matching, and smoothing 3. Stomach substantially exceeds elephant in the latest displayed years and shows durable published-book use across the longest available range. [Open the Google Books comparison.](#)

F. Completeness

Not applicable. Stomach is independently useful and is not proposed to complete a set of organs.

G. Compatibility

Not applicable. This proposal does not claim compatibility with an emoji from an older system.

Factors for Exclusion

A. Already represented

Nauseated Face with Fork and Knife can suggest sickness after eating, and Nauseated Face with Pill can suggest treatment. Neither sequence identifies the stomach itself or expresses digestion, fullness, butterflies in your stomach, or being unable to stomach something.

B. Overly specific

Stomach is a broad, familiar organ, not a disease, procedure, brand, or subtype. It supports ordinary messages about food, digestion, sensation, emotion, education, nutrition, and health.

C. Open-ended

Encoding Stomach would not automatically support liver, kidney, intestine, or every anatomical structure. Stomach is not proposed merely because it is an organ: it combines frequent everyday messages about hunger, fullness, nausea, and digestion with established expressions such as butterflies in your stomach, a strong stomach, and cannot stomach something. Anatomy or medical importance alone would not meet that boundary.

D. Transient

Stomach is durable, not tied to a temporary event, product, or campaign. Google Books shows published use across centuries, and current dictionaries document butterflies in the stomach and the verb stomach.

E. Faulty comparison

This proposal does not depend on another organ being encoded. Its case rests on Stomach's frequent everyday use, established literal and figurative meanings, and clear J-shaped design.

Other Information

The name Stomach is concise and searchable. Vendors should preserve the J shape, upper inlet, open inner curve, and short outlet, while varying color, angle, outline, and shading. Fine anatomical detail should yield to clarity at 18x18.
