

Medical Emoji

A focused 2026 filing decision and a defensible Unicode review path

Decision needed by July 17

One conditional lead. One fallback. No 2026 organ filing.

The decision is narrow

CONDITIONAL LEAD

Ultrasound

Advance only after the four missing Google captures are embedded and the monitor-plus-probe image passes an 18 × 18 px recognition review.

EVIDENCE + DESIGN GATE

FALLBACK

CT Scan

Use only if its 2020 evidence, current factor labels, and the submitter's explicit ownership warranty are refreshed. It is a fallback packet, not filing-ready today.

CURRENT-FORMAT REFRESH

HOLD

Kidney · Stomach · Liver

Keep the redesigned v1.7 organ packets as future-cycle assets. Their November 2022 declines remain inside Unicode's four-year re-review bar during the July 2026 intake.

ELIGIBILITY GATE

Four non-negotiable submission checks

01

Public PDF

One publicly accessible PDF link submitted through the official form; individual submitter names, title, and revision date.

02

Four example images

Color and true black-and-white artwork at 18 × 18 px and 72 × 72 px, all at the top of page 1.

03

Five usage screenshots

Google Search, Google Video Search, Google Trends (Web and Image), and Google Books Ngram embedded in the PDF; use elephant as the comparator where required.

04

Rights + factors

Explicit IP-rights warranty, current inclusion and exclusion factors, reproducible data, and no reliance on petitions or logos.

Submission readiness determines the 2026 order

1

Ultrasound

Conditional lead

Google Books Ngram is documented; four current Google screenshots and an 18 × 18 px recognition sign-off are still missing

2

CT Scan

Fallback

All five evidence categories are present, but the 2020 captures, factor labels, and ownership language need a current-format refresh

3

Kidney · Stomach · Liver

Future-cycle assets

The v1.7 artwork and PDFs are reviewable, but their November 2022 declines remain within Unicode's four-year re-review window

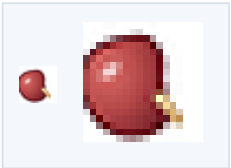

Do not label a concept filing-ready until its evidence, rights, formatting, and eligibility gates are all closed.

Organ art was rebuilt for small-size review

Kidney

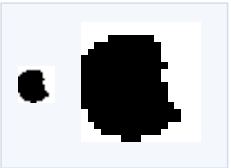

72 px color

18 px color
native | enlarged

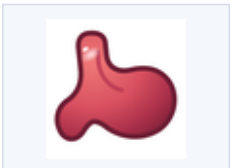

72 px B&W

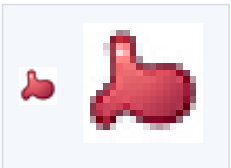

18 px B&W
native | enlarged

One specimen; hilum + ureter

Stomach

72 px color

18 px color
native | enlarged

72 px B&W

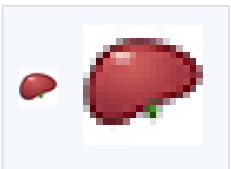

18 px B&W
native | enlarged

Joined J silhouette

Liver

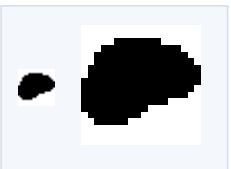

72 px color

18 px color
native | enlarged

72 px B&W

18 px B&W
native | enlarged

Full wedge; tucked gallbladder

The 18 px variants are shown near native size and enlarged for inspection; proposal files remain textless and strict black-and-white where required.

Microsoft's role is technical review, not outcome-seeking

1

Standards

Confirm the correct Unicode venue and carry a bounded discussion only if Microsoft approves the review path.

2

Product + design

Test the actual 18 × 18 px paradigms for recognition, accessibility, and plausible Segoe UI Emoji implementation.

3

Legal

Clear the image-rights route and any statement about possible implementation before it appears in a submission.

4

Medical leadership

Validate broad communication needs and keep the slate focused on general-purpose use.

Guardrail: request ordinary technical review. Do not imply Microsoft endorsement, implementation, or preferred treatment before approval.

Run a 48-hour evidence and design gate

0–12h

Route

Name the Microsoft standards owner and confirm the individual-submission route.

13–36h

Evidence

Capture the four missing Ultrasound Google categories in a manual session on an approved network.

37–48h

Design

Cold-test the 18 × 18 px monitor-plus-probe paradigm and obtain product and legal clearance.

Evidence capture is blocked on this network: Google Trends returns HTTP 429 and Google Search presents a CAPTCHA. Use a manual session on an approved network.

What we need from Microsoft

1

Name one standards owner and one Windows/Segoe UI Emoji design owner.

2

Confirm whether Ultrasound should proceed through the evidence gate, with CT Scan retained as the fallback.

3

Authorize technical review only; keep authorship, endorsement, and implementation language pending explicit approval.

REVIEW PACKET

- One-page decision brief
- Product/legal clearance sheet
- Artwork readiness board
- Selected proposal after gate
- Draft standards document marked for review
